

Operate your gates with only one hand

THE U-Latch solves several problems at once: It offers ease of installation; it handles large livestock; and it doesn't require welding.

Made in Eugene, Ore., the U-Latch is designed to fit 1½- to 2-inch livestock gates and panels.

The latch is bolted to the gate tubing either vertically or horizontally. It accom-

modates gaps, sags and uneven ground conditions.

The rounded edges are safe for horses and other livestock. It can be operated with one hand.

Suggested retail for the U-Latch is \$9.95.
