

Latch it right

Designed for use on tubular gates and fencing panels, the U-Latch Universal Gate Latch® is a simple solution for livestock owners. The U-Latch solves several problems at once. It installs with a wrench (no welding, no screwdrivers, no measuring). It secures large livestock (tested on horses, cows, sheep, llamas, alpacas, goats, pigs). It is easy to open one-handed and it keeps livestock safe ('Houdini' animals are deterred by the latching features).

Manufactured and represented by the U.S. company Co-Line Welding, also the maker of the top-selling Sure-Latch, the zinc-coated 13-ounce steel U-Latch is designed to fit 1 5/8" to 2" diameter gates and panels. The latch may be bolted vertically or horizontally to the gate tubing. The design allows for latching-post gaps, tight fits, sagging gates, latching two gates together and uneven ground conditions. All edges are rounded for safety. The two notches in the hardware accommodate various styles and sizes of link chain. Use one or both for added security.

The U-Latch Universal Gate Latch® is currently sold in feed stores in the West, Midwest and South. For more information about the U-Latch visit u-latch.com. To purchase, contact Co-Line Welding at (800) 373-7761 or Agri-Sales Associates at (615) 329-1141 for a list of local dealers. [EQU]
