BEATS BALING WIRE: The U-Latch is an American-made product aimed at providing one-handed gate operation on a variety of gates and livestock panels regardless of sag, gaps and uneven ground.

Operate your gate with just one hand

THE U-Latch solves several problems at once: It's easy to install, it handles large livestock, and it doesn't require welding.

Made in Eugene, Ore., the U-Latch is designed to fit 1 $\frac{5}{8}$ - to 2-inch livestock gates and panels. The latch is bolted to the gate tubing either vertically or horizontally. It accommodates gaps and sags and uneven ground conditions. The rounded edges are safe around horses and other livestock, and it can be operated with one hand.

Suggested retail for the U-Latch is \$9.95.
